DETAILED ACTION

Applicants have now affirmed the previous election of Group II, claims 9-19 and have further cancelled the previously withdrawn non-elected claims 1-8 and 20-24. Claims 9, 11, 15, and 17 are currently amended and new claims 25-35 have been added. Therefore, only claims 9-19 and 25-35 are still pending for consideration.

Specification

The previous exemplified objections to the specification have been overcome by the amendments filed on 31 October 2003. Accordingly, these previous objections are now withdrawn. The previously outstanding minor grammatical corrections still needed in the specification have been made by examiner amendment as noted below.

Claim Rejections - 35 USC § 112

The previous rejection of claims 11 and 17 under the second paragraph of 35 U.S.C. 112 has also been overcome by amendments to these claims. Accordingly, this rejection is also now withdrawn.

Claim Rejections - 35 USC § 103

The previous rejections of claims 9-19 under 35 U.S.C. 103(a) as being unpatentable over the previously cited references have been overcome by the amendments filed on 31 October 2003. Accordingly, these rejections are now withdrawn.

Art Unit: 1756

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The specification of this application has been amended as follows: (1) at line 3 on page 4, "present invention" has been changed to --the present invention--; (2) at line 7 on page 8, "to photodegradable" has been changed to --to form photodegradable--; (3) at line 3, "organometallic compound" has been changed to --an organometallic compound-- and at line 27, "metal complex" has been changed to --metal complexes--, both on page 9; (4) at lines 1-2 on page 10, "chromic" has been changed to --a chromic-- in both instances and "cobaltic" has been changed to --a cobaltic--; (5) at line 5 on page 11, "Nitriles surfaces" has been corrected to read --Nitride surfaces--; (6) at lines 17-19 on page 19, "conditions processing environment" has been changed to --conditions in the processing environment-- and "mass flow sensor" has been corrected to --a mass flow sensor--; and (7) at line 18 on page 20, "read only memory" and "random access memory" have been changed to --a read only memory-- and --a random access memory--, respectively.

Only minor grammatical changes have been made in the specification by the examiner as noted above in order to expedite prosecution for allowance of this application.

Allowable Subject Matter

Claims 9-19 and 25-35 are now allowed.

Art Unit: 1756

The following is a statement of reasons for the indication of allowable subject matter: independent claims 9 and 15 have now been amended and new independent claims 25 and 31 have now been added to include additional limitations requiring that the light degradable surface coupling agent (1) loses its adhesion properties upon exposure to light (claims 9, 15, 25, and 31) and (2) has a polar surface and a non-polar surface (claims 25 and 31). These additional limitations are considered to be patentable over the prior art of record in this case. While it is known to include a light degradable linking or coupling agent between a semiconductor substrate and an overlying resist, the cited prior art does not specifically teach that the coupling agent must lose its adhesion during a single step exposure to light of the overlying resist nor that the light degradable coupling agent has both polar and non-polar surfaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments accompanying the amendment filed 31 October 2003 have been fully considered and are persuasive. The previous exemplified objections to the specification and the previous rejections of claims 9-19 have been overcome by the amendments filed. Accordingly, these previous exemplified objections and these previous rejections are now withdrawn. The previously outstanding minor grammatical corrections still needed in the

Art Unit: 1756

specification have been made by examiner amendment as noted above in order to expedite prosecution for allowance of this application.
